Subject: Soils along Transit corridor

Kaleo

Attached are three maps identifying various soil map units and sand contents along the transit corridor. The map titled "Extent of soil map units with high sand content...." shows high sand content areas identified with a yellow color, these areas are dominantly the "Fill Land" soil map units. Fill Lands were filled for urban development. The fill materials are varied but are described as material dredged from the ocean or hauled from nearby areas, garbage, and general material from other sources.

Let me know if you have any questions or need any further assistance
