Subject: questions for Transit

Hi John,

I have been getting questions on timing and procedure for CZM Consistency Determination and haven't been able to find the answers.

For the first CZM application we submit that is triggered by the funding (New Start funding falls under Federal Grant Source 20.500 and therefore requires your review), do we have to have the completed or actually submitted New Start application? Our New Start application cannot go in until the engineering is further along so we don't have it done yet, but we'd like to get the CZM application in to you. The CZM application form asks us to attach our funding application.

Do we need to have the CZM Consistency Determination when we publish the FEIS (which is what I've always thought to be true, but others disagree) or is the requirement that it be done prior to the ROD being issued? I cannot find anything in the regulations to clarify the required timing -- pls point me to the correct requirements.

Thanks for your help.
