Subject: RE: rail energy use

Here is the short answer to your electricity question:

Estimated daily electricity consumption by 2017 is about 500MKH with the peak demand of 50MW. By 2030, the daily consumption should be 770MWH with the peak demand of 80MW.

Aloha Mr. Hamayasu,
First of all MAHALO for being so helpful. Please send me any information you have about projected energy use. I can sort through files if it is embedded in a report.
