Subject: ALP Review

Hi Steve. I hope you're enjoying the beautiful Oklahoma spring weather... and that you brought a jacket.

I know you're tied up, but we're having a tough time of it here trying to figure out what happens next on the Rail project. We thought we were going to get a section to “drop into” the EIS from the FAA environmental reviewers. At least that is what Pete and Dave said when we met in LA in January. Now, Pete tells Faith the review of the ALP will take between 30 and 60 days. While we understand that may be the typical timeline, this project is doing anything but “typical”. What we really want to know is what the FAA looks for in an EIS and what, if anything, we need to do to get the ALP conditionally approved. At our meeting at HDOT in January, we asked if there was anything we needed to do for the ALP and were told no. Now, we really don't know.

Can you share any insight into how we can expedite our part of the work? We would like to submit the EIS to FTA very soon, but need help making sure we cover the right things.

Thanks!

Steve Hogan
