Bill,

Here is a table Dennis Henderson put together for an LA Project to get some off-model feel for possible usage if a direct (or close) link was made available. Maybe on the order of 8 to 9 percent for large airports with rail service (local passengers only - percentage). Hard to get this data and make any sense out of it. Patrick Romero in Seattle worked on compiling this information.

I haven't seen a tabulation of airport ridership in some time. TRB just produced a synthesis of airport-access models. While I have not read it, the report might provide some data and contact information. The URL is:

[http://onlinepubs.trb.org/onlinepubs/acrp/acrp\\_syn\\_005.pdf](http://onlinepubs.trb.org/onlinepubs/acrp/acrp_syn_005.pdf)

In the past, I recall seeing documents/reports which summarized the number of actual air passenger trips to Airports via Rail. In general, such ridership was fairly modest. We have estimated air passenger related rail trips to the Honolulu Airport, and as expected, the volume is relatively small. I would like to be able to defend/compare that estimate with data from elsewhere. Please let me know if you have such information or know where to get it. Thanks.
