Hi Joe, Thank you for your quick turnaround. Lawrence will respond back in a separate email regarding your question on wheel squeal. This information is included in the revised Final EIS noise section.

Subject: RE: HHCTCP Addendum to the Noise and Vibration Technical Report

Thank you, Amy.

I have reviewed it and, with the exception of the wheel squeal issue noted below, we are satisfied with the noise analysis of the yard and shop.

The exception is that there are two tight-radius curved tracks going around the Maintenance of Way building immediately adjacent to the main building of the college. The analysis of noise impacts on the college did not take into account the wheel squeal on these curves. In the interest of time, a commitment in the FEIS to providing automatic track lubrication devices on these curves to mitigate wheel squeal would be acceptable. Alternatively, the full analysis may be performed and delivered for review.

We expect to see the revised noise section of the FEIS updated to present the yard/shop information in the report addendum, the details discussed above, and the treatment of TPSSs discussed in previous emails.
