Subject: RE: Honolulu alignment encroaches runway - PMOC's first memo

Thank you, Ray. I have been tweaking the memo slightly with better language describing the runways and declared landing distances. I can incorporate my changes in the version you have after you finish with it.

I am reviewing our current memo and I think we need to add the PMOC's first memo on the issue.

Thanks for approving Jacobs for the FEIS review awhile back. They have done an excellent job. They have discovered something that everyone seems to have missed. I think you should know about this since this will come up again as an issue.

Ray - I am forwarding the email chain and memo we prepared regarding the proximity of the Honolulu guideway to the airport runway. This was included as Comment 2 in our DRAFT Spot Report on the engineering review of the AFEIS.

Please let me know if you have any questions.

Thanks

Subject: RE: FAA regulations relevant to HHCTCP near runways

Harvey - We had our airport planners review this issue. We understand that your staff is coordinating with HDOT. However, we are still concerned that there may be conflicts with the proximity of the guideway to end of the runway that may pose a problem with FAA, as outlined in the attached memo.

AR00113047

I wanted to share this with the project team to make sure they thoroughly vet all potential issues. As noted in the memo, the project team may have more detailed information that led them to their conclusions. We are not expecting a response to this memo. We just do not want this to mirror the situation of Tri-Rail's Fort Lauderdale Airport Station.

Thanks,

Timothy L. Mantych, P.E. (MO, IL)

Tim:

The question was asked last week about the relationship of the trackway to the end of the Airport runways. The below email and attachment should answer your questions.

Julia:

Please upload the email and attachment.

<<HNL Runways with OFA, RSA and RPZ.pdf>> Harvey,

Regarding the construction of HHCTCP near Honolulu Airport runways, relevant FAA regulations are included in Title 14 CFR Part 77 (aka "Part 77").

There are three primary horizontal zones to avoid:

1. Runway Protection Zone (RPZ): FAA would prefer to keep buildings and people outside this area, and would prefer to own it; but construction is not prohibited.
2. Object Free Area (OFA): Nothing permanent can be built within this zone except navigational aids.
3. Runway Safety Area (RSA): Only objects allowed here are runway lights and navigational devices; e.g. planes are not even allowed to park here.

As you can see in the attached diagram, we are outside the stricter OFA and RSA, but we are inside the RPZ. As a result, we must continue to coordinate with FAA (through HDOT-A as we have been doing) and at some point (about 24 to 30 months before construction) we will need to submit an aeronautical study, aka Part 77 study. This appears to be the primary FAA

AR00113048

requirement for that part of the alignment near the mauka end of runways 22R and 22L, and is what they mentioned in their comments on the Draft EIS. However there could be a need for other studies or analysis requested by FAA, including for other parts of the airport, as the project continues to move forward.

Please let me know if you need additional explanation or assistance.

Thanks,
Mark
