July 13, 2010

To: The City Council  
City and County of Honolulu  
Honolulu, Hawaii 96813-3077

There's no reason to delay the rail transit project anymore. We have invested five years of work to bring this project to this point and it is very ready to start. The Federal Transit Administration has reviewed and approved for release the Final EIS. From that we can conclude that this makes the Final EIS a complete document. We as a community support rail transit on Oahu. It's ready so let's build it.

Rail transit is an efficient, affordable and reliable commute that will run independent of road traffic. We could use it to commute to work, school or to any appointments and reliably expect to arrive on time. Rail transit is a clean and sustainable form of mass transit that will remove a lot of automobile traffic from the streets. It will also be Hawaii's much needed economic stimulus that will create thousands of jobs currently and into the future.

Up to now we have heard a lot of discussion pertaining to the Honolulu rail transit project. Those for and against the project, alternative concepts and cost concerns with suggestions for potential independent audits, but all things considered we need to start because what we are building is a mass transit system that will serve not just our generation, but many generations to come. It will change the complexion and demographics of Oahu and change how we commute on a daily basis. These will be the lifestyle changes that we begin to pass on to the next generations who will adopt rail transit as part of their way of life.

Yours very truly
