Aidan,

Attached are typical station plan and cross-section drawings that were developed for the 1992 project. We are developing new prototype drawings, but the platform width and vertical circulation elements shown are consistent with our present thinking. Assume the guideway dimension is 24 feet, and the station length is 270 to 300 feet.

Note: We are in the process of developing design guidelines and prototypes for the project; therefore we caution your team to use these drawings for planning purposes only. If you have any question please free to call.

Jim Dunn
